

1. Ping command uses:-

→ The ping command is used to check the network connectivity between two devices. based on the IP address

2. Netbios protocol :-

Netbios is a network protocol its use to communicate to the LAN connected computers using name. and communicating using LAN

3. S.M.P protocol :-

→ This is a network protocol, used to allow computer to share files, folder over a network

4. Ping working between 50.0.0.10 to 50.0.0.20

→ when the command executes. The Application layer create Echo data using ICMP. the data next send presentation layer, in this layer add format of data and session layer add time. next network layer add source IP and Destination IP using IP. so its called packet. next data link add source MAC and Destination mac. but we don't know DMAC so use ARP Request to find mac. and the data shared in the 50.0.0.20 IP. and return to the 50.0.0.10.
